Fitting notes for: – Weather Board

Pack contents:- Weather Board
Water Gage
Thermometer

Tools required for fitting: - Drill
Screw driver
Screws

Please note:- These items are designed mainly for outdoor use and storing them in hot conditions may stress the timber, resulting in warping and twisting of the timber.

Before any wall fitting is carried out it is important to make sure there are no existing services beneath the desired placement points, i.e. electric, gas, water or drainage pipes.

Check existing plans for services.

The items can be fitted to a wall, wooden or metal fence. Make sure the fence or wall is structurally sound. Fix with appropriate fixings for the material. Check the length of the screws to make sure the screw ends are not sticking out at the back; remove any sharp edges if they do penetrate.

Once the weather board is fitted, attach the water gage by loosening the screw on the black circular fixing, sliding the water gage in and gently tightening the screw.

Remove the screw from the thermometer section, slide the bottom of the thermometer into the wooden holder and then replace the top screw to secure the thermometer in place.

If you require any further advise please contact us on 0113 2556342.
