

Fitting notes for:- Bird Bath

Pack contents: Bird bath

Tools required for fitting:-

Digging Equipment

Fixing materials

Before any digging is carried out it is important to make sure there are no existing services buried beneath the desired placement points, i.e. electric, gas, water or drainage pipes. (Look for existing manhole covers as a clue.)

Check existing plans for services.

Place the bird bath where you wish to site it. With a spade, mark closely around the leg. Move the bird bath to one side whilst digging the holes. Remove turf and place aside for later use. The holes should be fractionally wider in diameter than the leg.

Carefully lower the bird bath into the hole. Look to see if it is level - using spirit level on the side of the post if necessary - and adjust as appropriate. Set in with appropriate materials and reinstate the turf at ground level.

The bird bath comes with a removable bath; it is important to regularly change the water and clean the bath to help keep the birds using it healthy. Use a non-abrasive cloth for the cleaning.

For the longevity of the bird bath you may need to apply more varnish periodically.
