Fitting notes for: - Direction sign

Pack contents:

- 1 x Posts
- 8 x Signs
- Wooden shape for hammering sign

Tools required for fitting:-

- Hammer
- Digging Equipment
- Materials for post fixing
- Spirit Level
- Glue

Optional: Compass

Before any digging is carried out it is important to make sure there are no existing services buried beneath the desired placement points, i.e. electric, gas, water or drainage pipes. (Look for existing manhole covers as a clue.) Check existing plans for services.

Place the post where you wish to site it. (Make sure required gap between the direction post and other structures, such as, climbing frames is maintained).

Using a spade, mark closely around the pole. Remove turf and place aside for later use. Move the post to one side whilst digging the holes. The hole should be fractionally wider in diameter than the post and set in to the depth of the metal support.

Lay the signs out in the correct order. *Check the sign is the correct way up.* Spread the glue over the tenon and using the wood provided knock into the post, being very careful of the end of the sign.

Use the compass to align the north sign to the North Pole if required.

Or align signs towards the places indicated. Set in the post with appropriate materials, checking the sign is nicely verticle. Reinststate the turf.

The post is made from naturally durable timber, but to protect the art work, yacht varnish has been applied. To increase the longevity of the posts it is best to reapply varnish if needed.
